Price a bid on your own rates and send the quote

Start a bid and price the crew on your own rates. A line priced under its cost rate shows its total in red. Load the worked example to see the pricing match your pricing workbook, save a revision, pick how much detail the quote shows, and send it for signature. Sending records the bid as sent and shows a waiting banner. No email goes out.

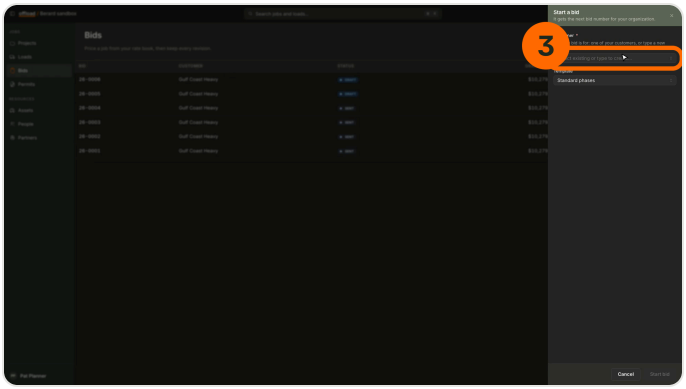

1 Open Bids

Bids in the sidebar lists each bid with its customer, status and grand total.

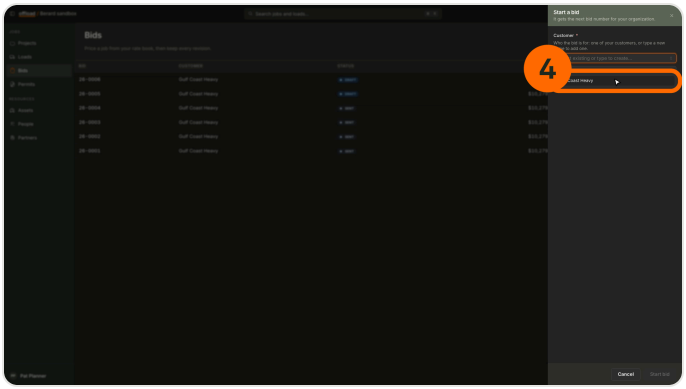

2 Start a bid

Choose **Start a bid** at the top right.

3 Open the customer list

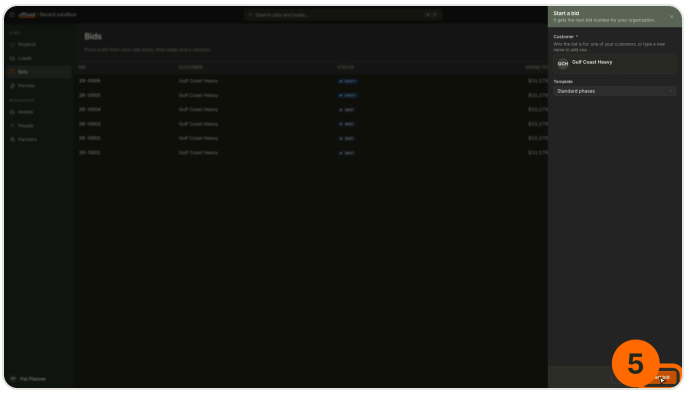

Open **Customer**. Pick one of your customers, or type a new name to add one. **Start bid** stays grayed out until you pick a customer.

4 Choose the customer

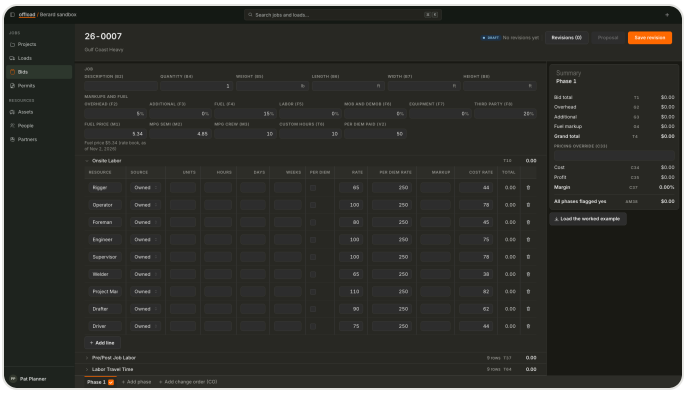

Choose the customer from the list.

Price a bid on your own rates and send the quote, continued

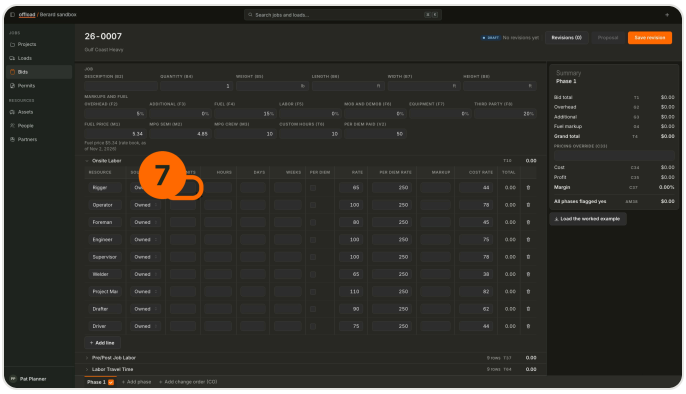

5 Start the bid

Choose **Start bid**. The bid gets the next bid number for your organization.

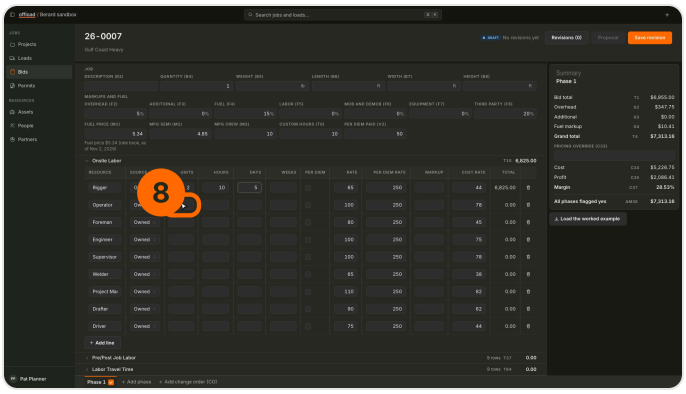

6 The sheet opens on your own rates

The new sheet opens on your own crew rows, each with its **Rate** and **Cost rate**, and the **Fuel price** with the date it was set. Nothing is priced yet, so the **Summary** reads $0.00.

7 Type the rigger crew

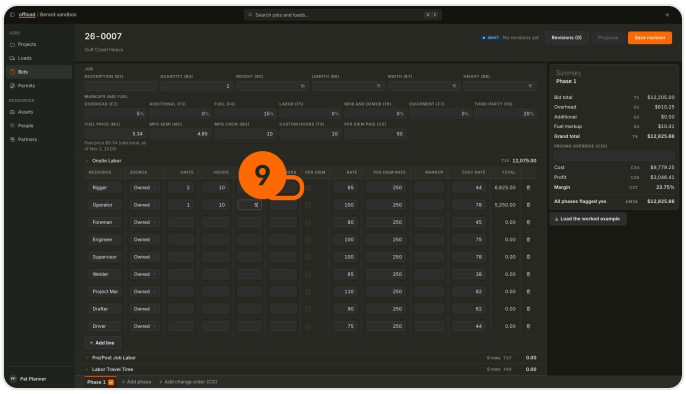

On the **Rigger** row, type 2 in **Units**, 10 in **Hours** and 5 in **Days**.

8 Type the operator

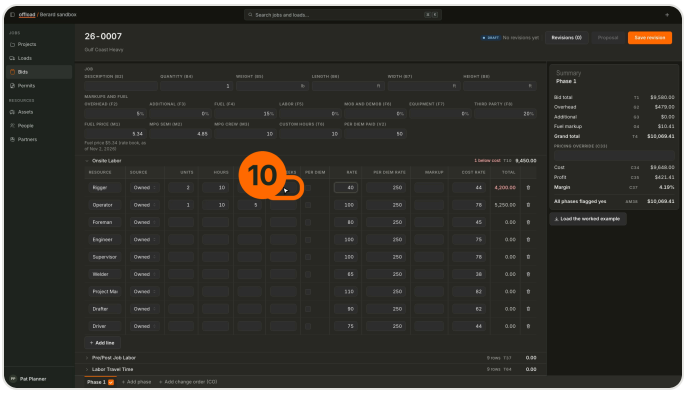

The **Summary** prices the sheet as you type: **Grand total**, **Cost**, **Profit** and **Margin**. On the **Operator** row, type 1 in **Units**, 10 in **Hours** and 5 in **Days**.

Price a bid on your own rates and send the quote, continued

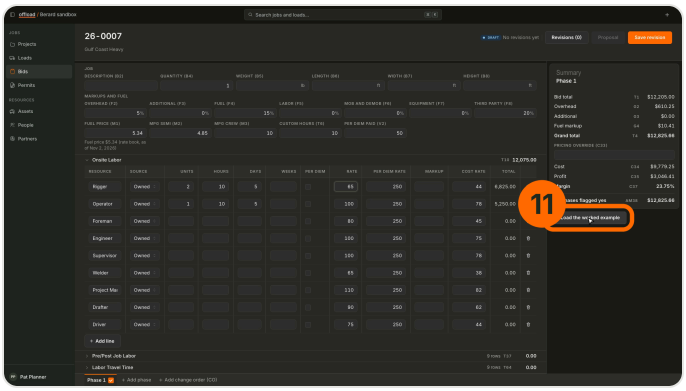

9 Set a rate under its cost rate

On the **Rigger** row, click **Weeks** and press Tab twice to reach **Rate**, then type 40. That is under the row's **Cost rate** of 44.

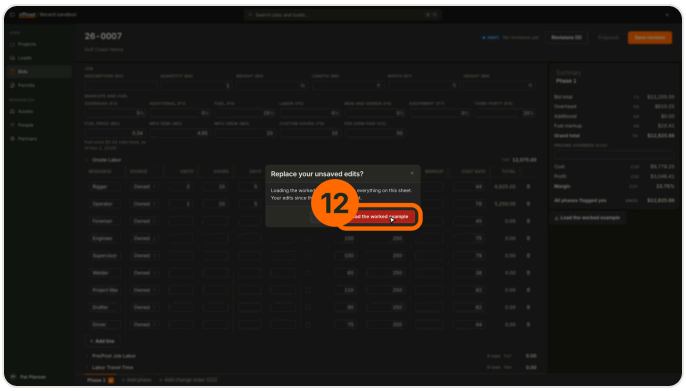

10 Set the rate back

The line total turns red and **Onsite Labor** reads **1 below cost**. Set the **Rate** back to 65 the same way, and the warning clears.

11 Load the worked example

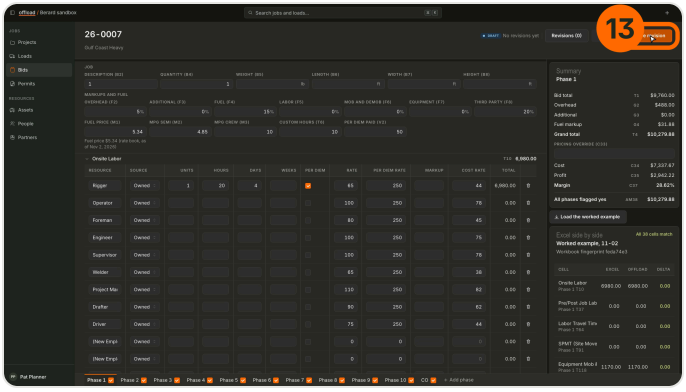

To see the pricing match your pricing workbook, choose **Load the worked example**. It replaces everything on the sheet, so it asks first.

12 Confirm the worked example

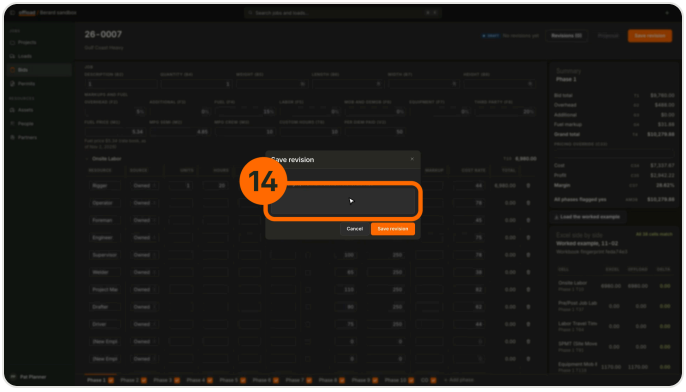

Choose **Load the worked example** in the confirmation.

Price a bid on your own rates and send the quote, continued

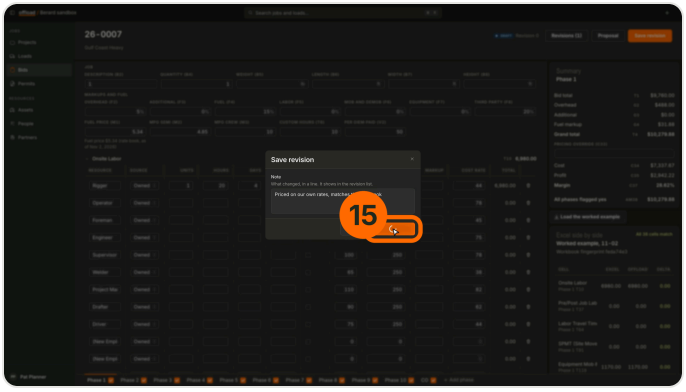

13 Save a revision

Excel side by side lists each cell with the workbook's value, the sheet's value and the difference, and reads **All 38 cells match**. Choose **Save revision**.

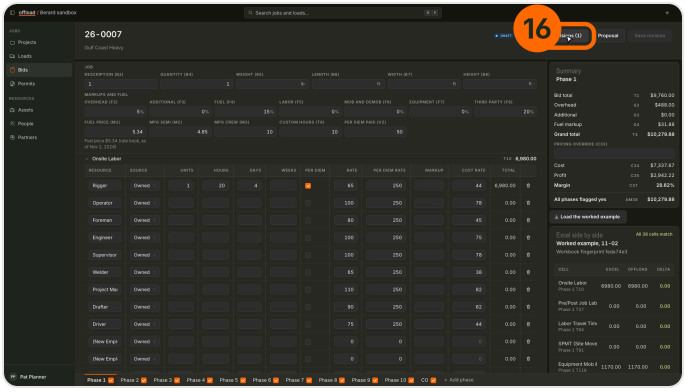

14 Add a note

In **Note**, write a line on what changed. It shows in the revision list.

15 Save the revision

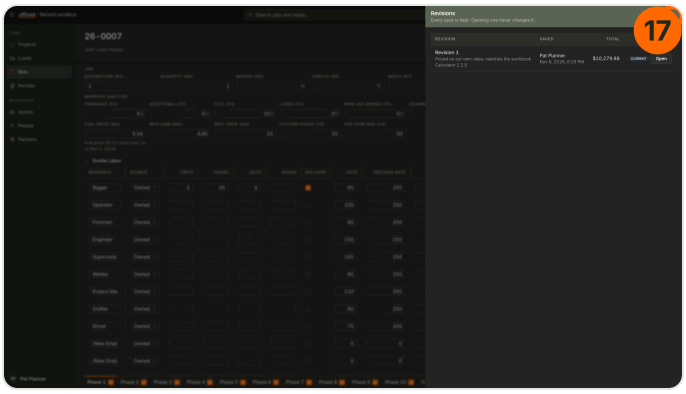

Choose **Save revision** in the dialog.

16 See every revision

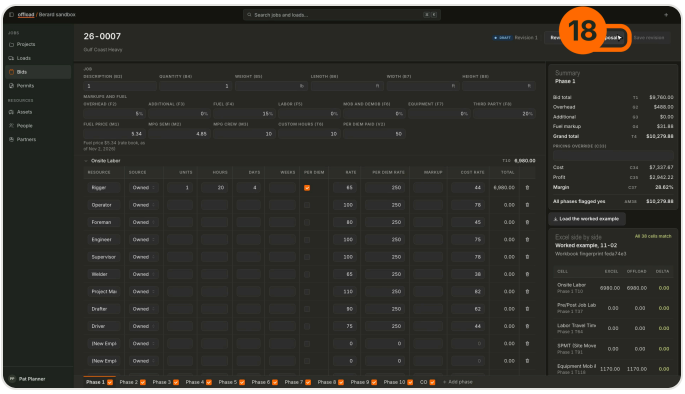

The header now reads **Revision 1**. Choose **Revisions (1)** to see every save of the bid, with who saved it, when, and its total. Opening one never changes it.

Price a bid on your own rates and send the quote, continued

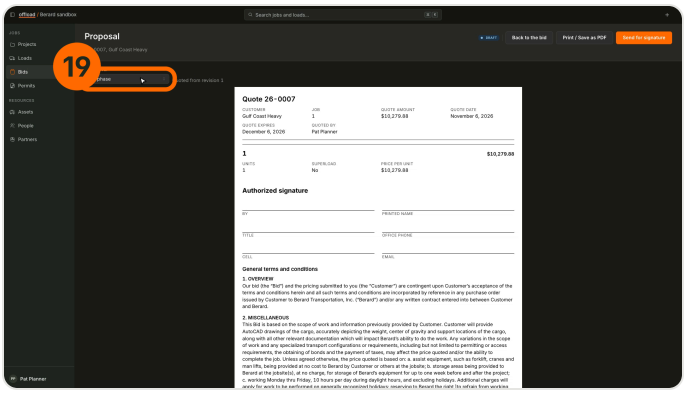

17 Close the list

Close the list.

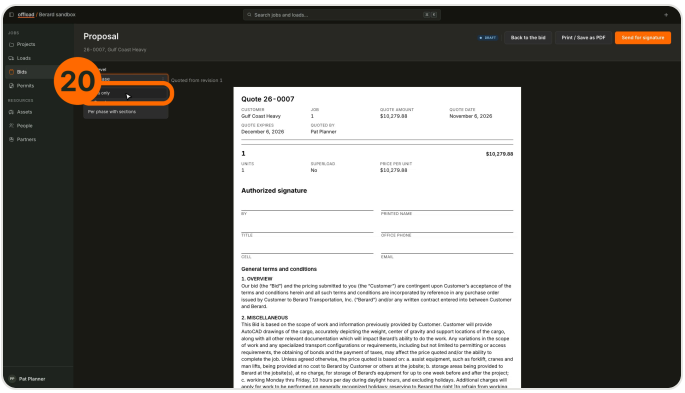

18 Open the quote

Choose **Proposal** to see the quote, built from the revision you saved.

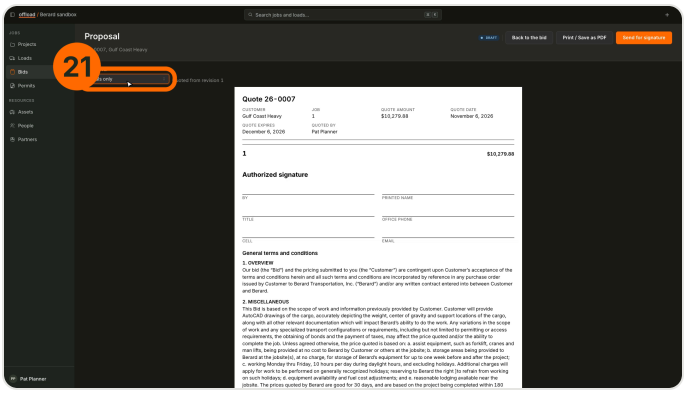

19 Open the detail level

The quote opens at **Per phase**. Open **Detail level**.

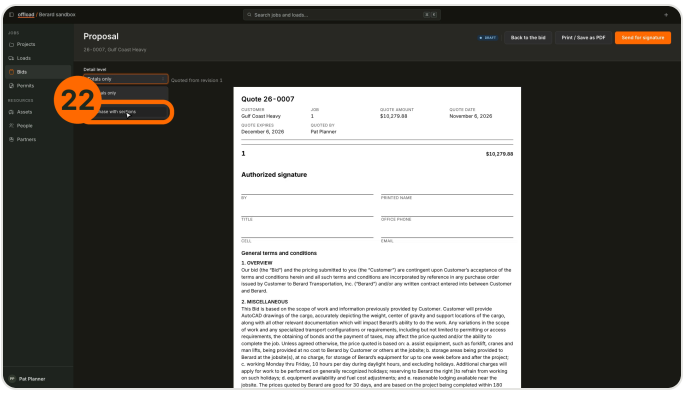

20 Totals only

Choose **Totals only**.

21 Change the detail level

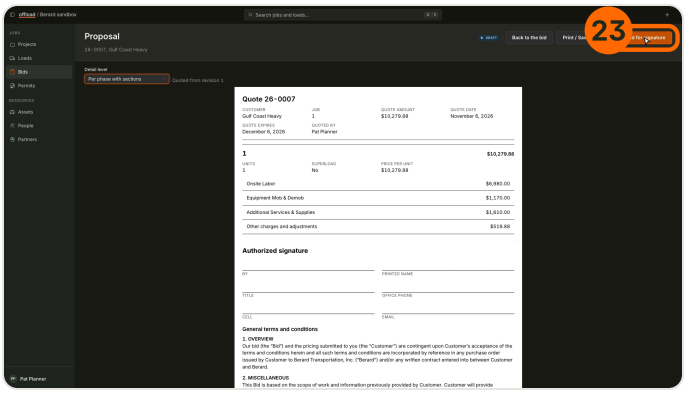

Totals only shows one amount for the job. Open **Detail level** again.

22 Per phase with sections

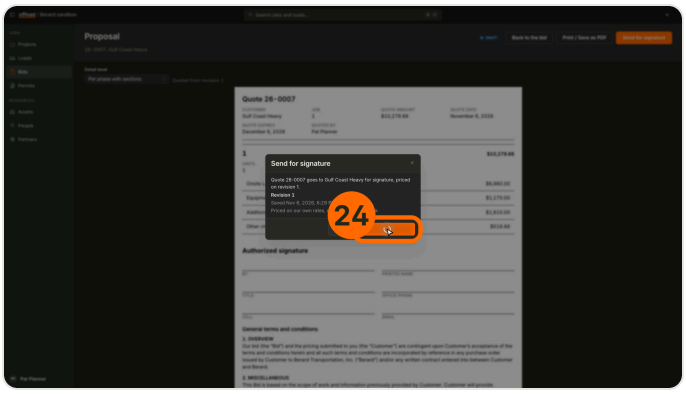

Choose **Per phase with sections**.

Price a bid on your own rates and send the quote, continued

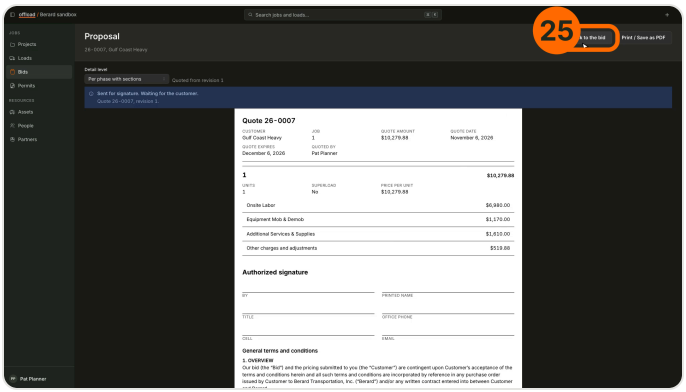

23 Send for signature

Per phase with sections gives each section its own priced line. **Print / Save as PDF** prints the quote at this level. Choose **Send for signature**.

24 Confirm the send

The confirmation names the quote, the customer and the revision it is priced on. Choose **Send for signature** to confirm. That records the bid as sent and shows a waiting banner with the quote number. No email is sent.

25 Go back to the bid

The banner says the bid was sent for signature and is waiting for the customer, with the quote number. Choose **Back to the bid**, and the sheet reads **Sent**.
