

OFFLOAD · LOAD SHARING

ONE LOAD, EVERY SEAT.

A broker shares it up to the shipper,
down to the carrier, and out to a pilot car.
Everyone sees exactly their slice, and only that.

Offload · June 2026

THE CAST

One load. Four parties, each with a different stake and a different slice of access.

Mitchell and Sons

BROKER

Owns the load and the project. Shares it up, down, and out, and can pull any share back.

- **Zita Dickinson** · org admin

Kemmer Group Transport

CARRIER

Runs the load. Different people, different access.

- **German Schowalter** · dispatcher
- **Eveline Schiller** · driver
- **Josefina Bins** · viewer

Lowe Contractors

SHIPPER

The customer whose freight this is. Wants read-only visibility into status, nothing more.

- **Nathaniel Bins** · org admin

Pilot car

ESCORT

Runs ahead of the load. Needs the route and live position, has no Offload account.

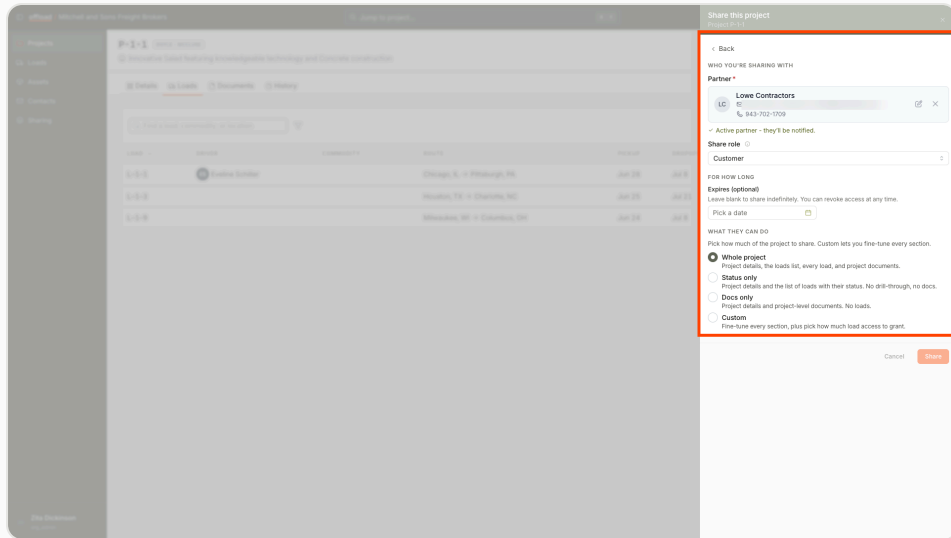

- Opens a **public link** in a browser

The load: L-1-1, Chicago to Pittsburgh. 97'5" long, 162,326 lbs, on project P-1-1.

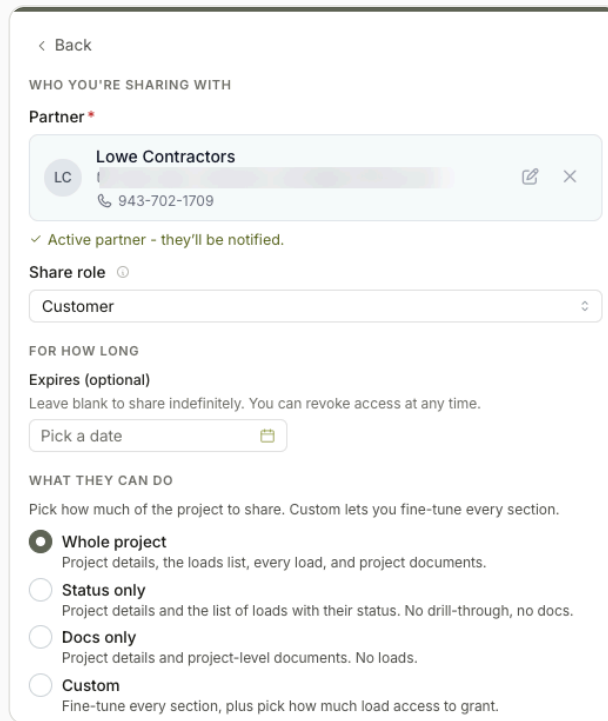

UP · BROKER → SHIPPER

SHARE THE WHOLE PROJECT UP TO THE SHIPPER

The shipper owns the freight and wants to watch it move. The broker shares the project to them as a read-only Customer, no dispatch, no editing.

Manage access on the project, sharing to Lowe Contractors.

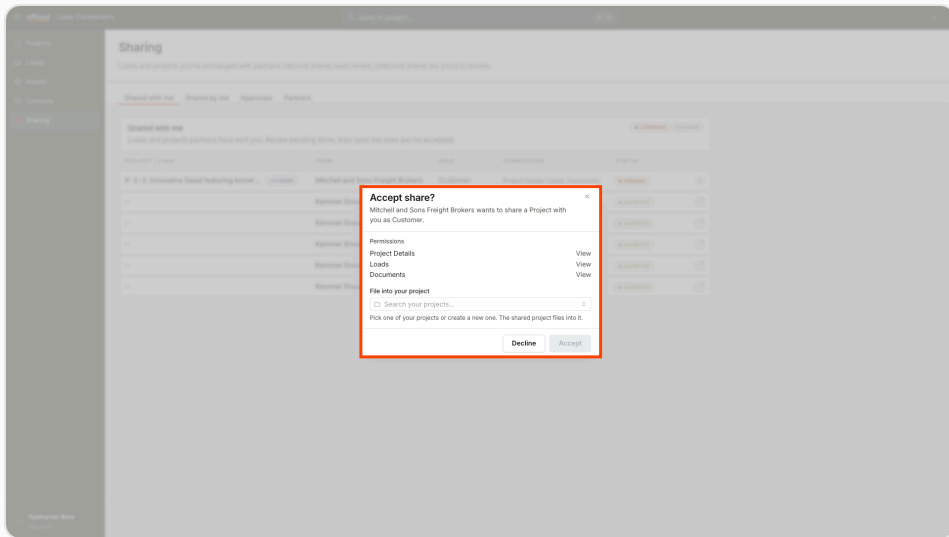

Up close: role Customer, "Whole project" read-only. Presets for Status only and Docs only, or fine-tune with Custom.

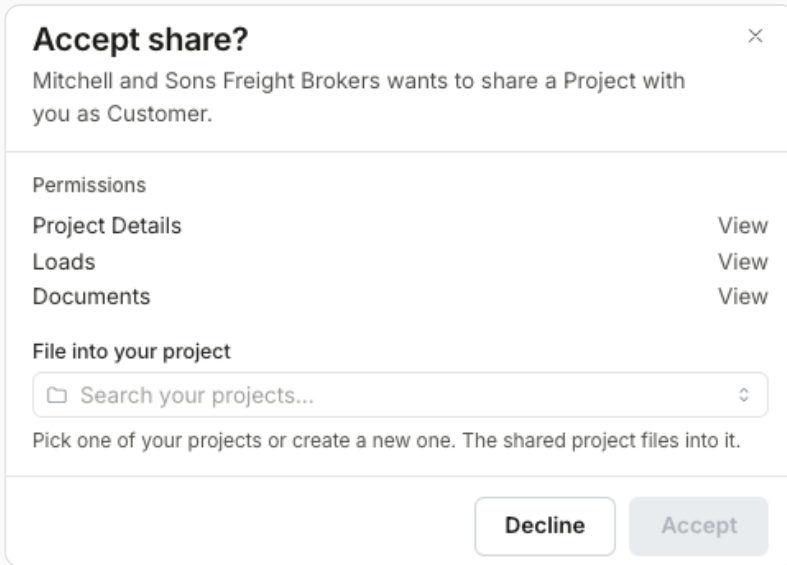

UP · BROKER → SHIPPER

THE SHIPPER ACCEPTS, READ-ONLY

It lands in the shipper's inbox. They see exactly what's being granted before they accept, and they file it into their own workspace.

The accept dialog over the shipper's Sharing inbox.

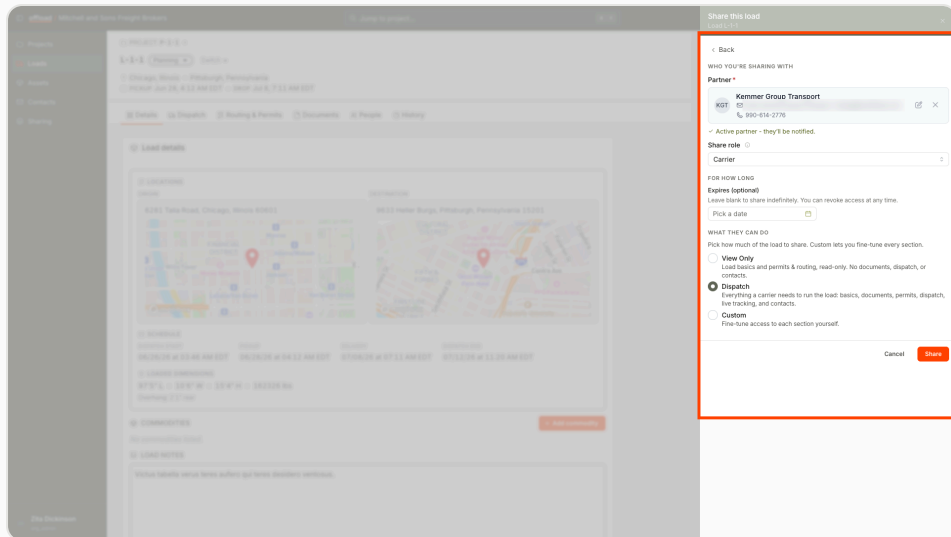

Up close: "a Project with you as Customer." Project details, loads, and documents, all View. No dispatch, no edits.

DOWN · BROKER → CARRIER

SHARE THE LOAD DOWN TO THE CARRIER

Now the load goes to the company that will actually run it. The broker shares it at the Dispatch preset, the carrier's working level.

The share panel opens right on the load detail page.

WHO YOU'RE SHARING WITH

Partner*

Kemmer Group Transport

KGT 990-614-2776

✓ Active partner - they'll be notified.

Share role ⓘ

Carrier

FOR HOW LONG

Expires (optional)

Leave blank to share indefinitely. You can revoke access at any time.

Pick a date

WHAT THEY CAN DO

Pick how much of the load to share. Custom lets you fine-tune every section.

☐ View Only

Load basics and permits & routing, read-only. No documents, dispatch, or contacts.

☒ Dispatch

Everything a carrier needs to run the load: basics, documents, permits, dispatch, live tracking, and contacts.

☐ Custom

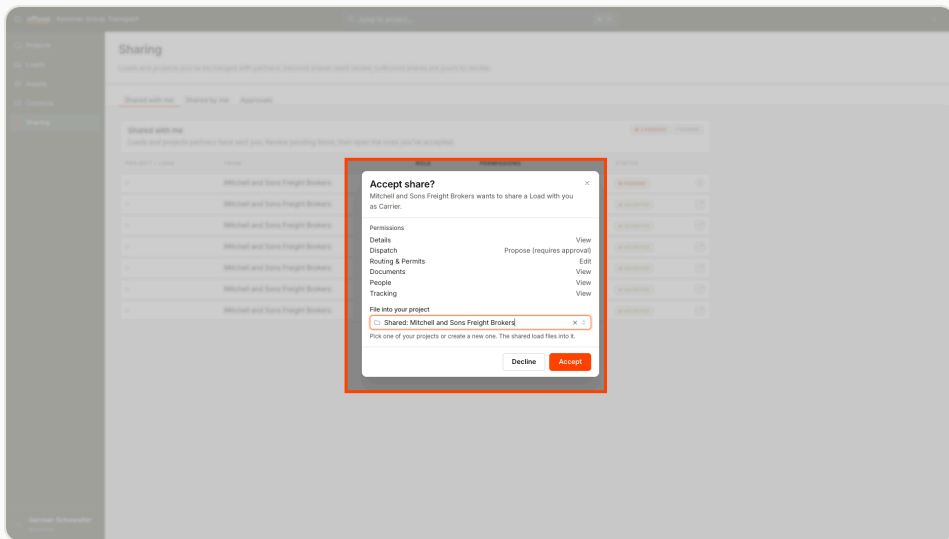

Fine-tune access to each section yourself.

Up close: Kemmer Group Transport, role Carrier, Dispatch preset. View Only and Custom are also there.

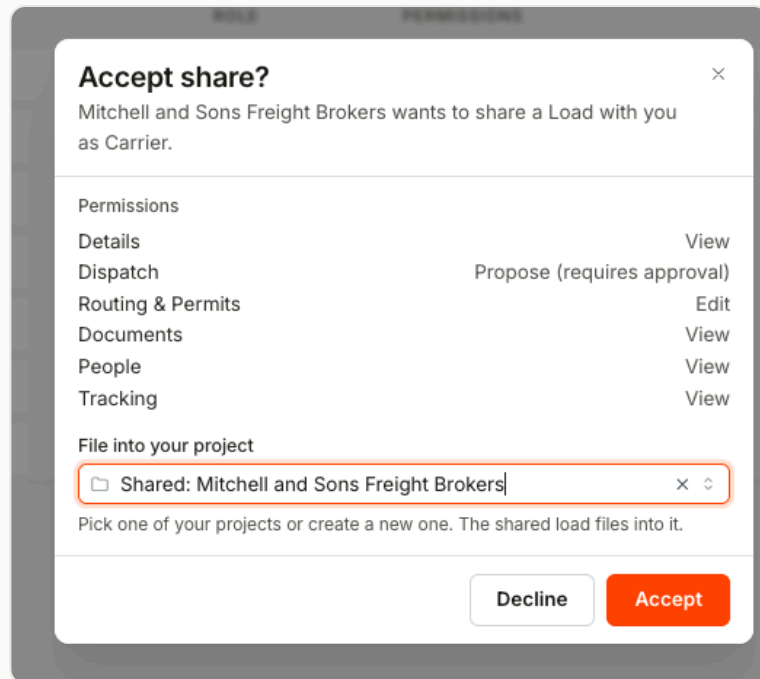

DOWN · CARRIER

ACCEPT AND FILE IT

German finds the pending share, reviews what's granted, and files the load into one of his own projects.

The accept dialog over the carrier's Shared - with - me inbox.

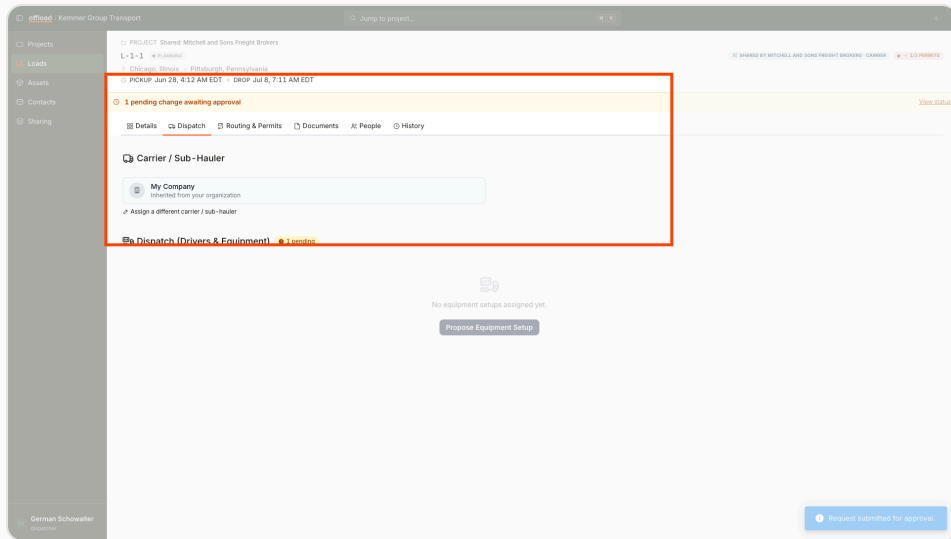

Up close: a plain-English permission summary. Neither side ever sees the other's project structure.

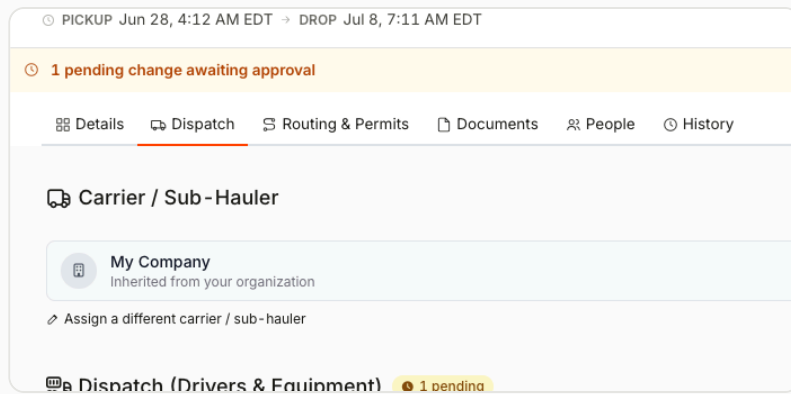

DOWN · CARRIER

SEE IT FILTERED, PROPOSE A CHANGE

The carrier sees the load through the share's permission filter. Proposing an equipment setup lands as a request, not an applied change.

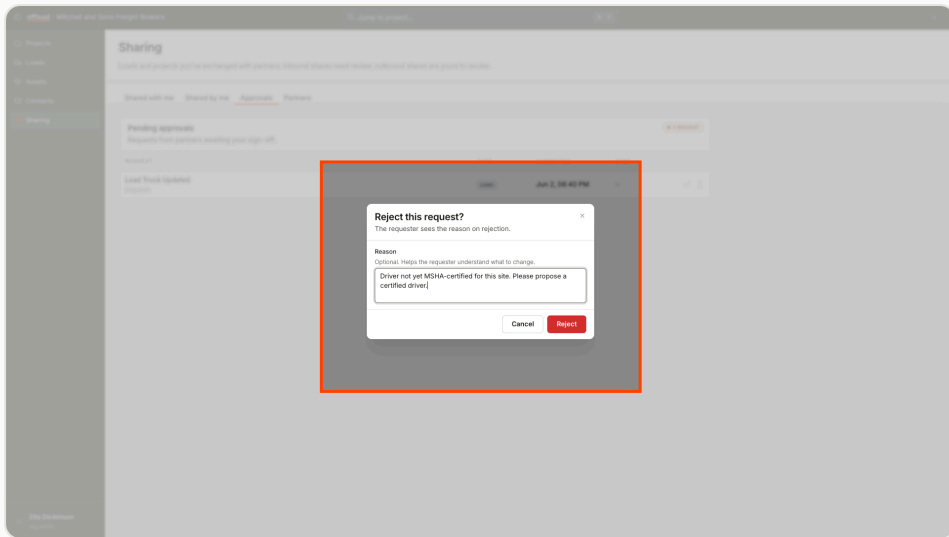

The shared load, badged "Shared by Mitchell and Sons."

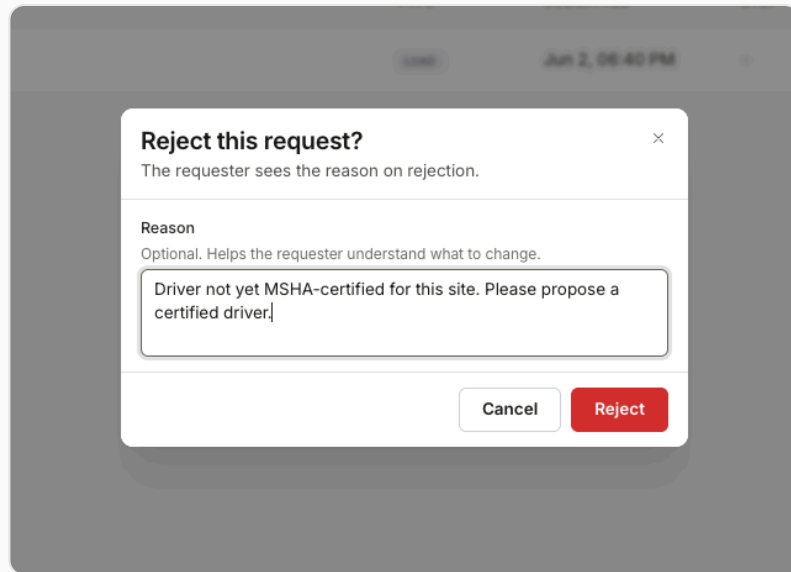

Up close: "1 pending change awaiting approval." Nothing touches the broker's load until they approve it.

APPROVE ONE, REJECT ONE

Requests queue in the broker's Approvals inbox. They approve the equipment setup, then reject a driver proposal with a written reason.

Rejecting a request from the Approvals inbox.

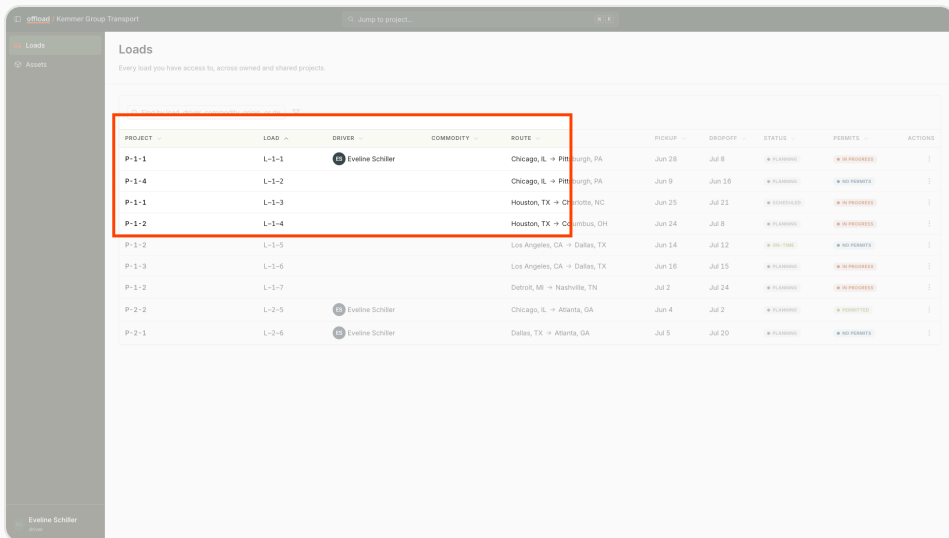

Up close: the reason goes back to the carrier. The owner stays in control of their load.

DOWN · DRIVER

THE DRIVER RUNS IT

Once the broker approves the driver proposal, Eveline gets access to exactly that load: her route, her permits, her schedule.

Loads

Every load you have access to, across owned and shared projects.

PROJECT	LOAD	DRIVER	COMMODITY	ROUTE	PICKUP	DISPOFF	STATUS	PERMITS	ACTIONS
P-1-1	L-1-1	 Eveline Schiller		Chicago, IL → Pittsburgh, PA	Jun 28	Jul 8	IN PROGRESS	 NO PERMITS	
P-1-4	L-1-2			Chicago, IL → Pittsburgh, PA	Jun 9	Jun 16	IN PROGRESS	 NO PERMITS	
P-1-1	L-1-3			Houston, TX → Charlotte, NC	Jun 25	Jul 21	IN PROGRESS	 NO PERMITS	
P-1-2	L-1-4			Houston, TX → Columbus, OH	Jun 24	Jul 8	IN PROGRESS	 NO PERMITS	
P-1-2	L-1-5			Los Angeles, CA → Dallas, TX	Jun 14	Jul 12	IN PROGRESS	 NO PERMITS	
P-1-3	L-1-6			Los Angeles, CA → Dallas, TX	Jun 16	Jul 15	IN PROGRESS	 NO PERMITS	
P-1-2	L-1-7			Detroit, MI → Nashville, TN	Jul 2	Jul 24	IN PROGRESS	 NO PERMITS	
P-2-2	L-2-5	 Eveline Schiller		Chicago, IL → Atlanta, GA	Jun 4	Jul 2	IN PROGRESS	 NO PERMITS	
P-2-1	L-2-6	 Eveline Schiller		Dallas, TX → Atlanta, GA	Jul 5	Jul 20	IN PROGRESS	 NO PERMITS	

Eveline's loads list, with her assignment on L-1-1.

PROJECT	LOAD	DRIVER
P-1-1	L-1-1	 Eveline Schiller
P-1-4	L-1-2	
P-1-1	L-1-3	
P-1-2	L-1-4	

Up close: her name on the load. Assignment flows from approval, no separate account setup, no emailed PDFs.

DOWN · VIEWER

SAME LOAD, DIFFERENT SEATS

The dispatcher and the viewer open the same shared load. One can act, one can only look. The data is identical; the actions are not.

L-1-1 • PLANNING

The viewer: the same Dispatch tab, read-only. No buttons, no edits.

BRING IN A PILOT CAR WITH A PUBLIC LINK

A pilot car runs ahead of an oversize load. They need the route and live position, not an account. A public link gives them exactly that, scoped and time-boxed.

Generate a public link from the load's Manage access panel.

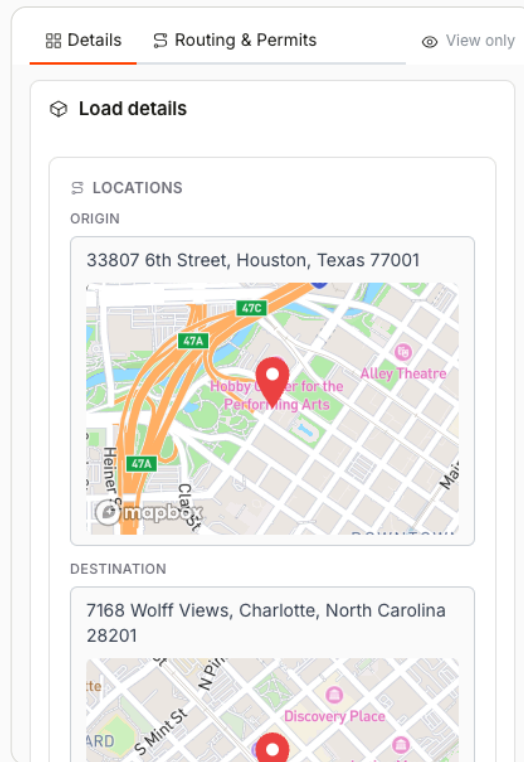

Up close: read-only, 3 sections (details, routing, tracking), expires on a date. Copy it, or revoke it any time.

OUT · DRIVER, MOVE DAY

OR STRAIGHT FROM THE CAB

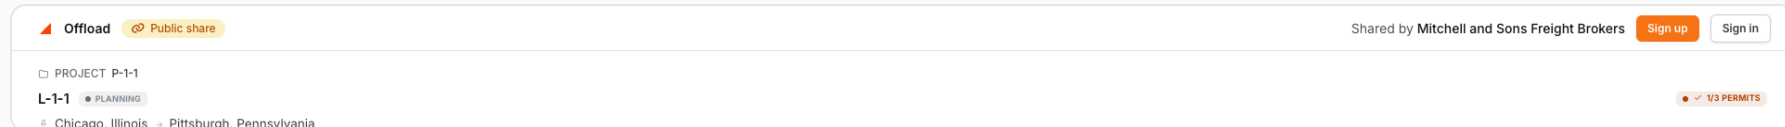

The office can generate the link, and so can the driver. On the day of the move, they share the route from their phone: a QR the escort scans, or a text. Same scoped, time-boxed link, no account for the crew.

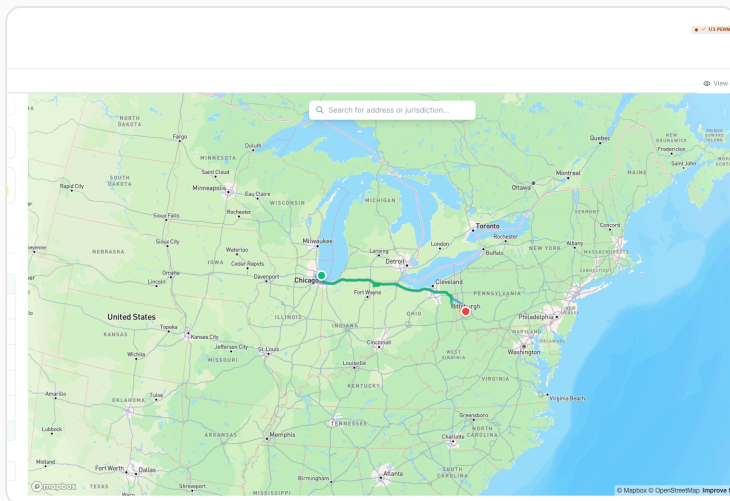

OUT · PILOT CAR

THE PILOT OPENS IT, NO LOGIN

Whoever holds the link opens the load in their browser. No account, no sign-in. They see the route and tracking, and nothing else.

The public page: badged as a public share, attributed to the owner, view only.

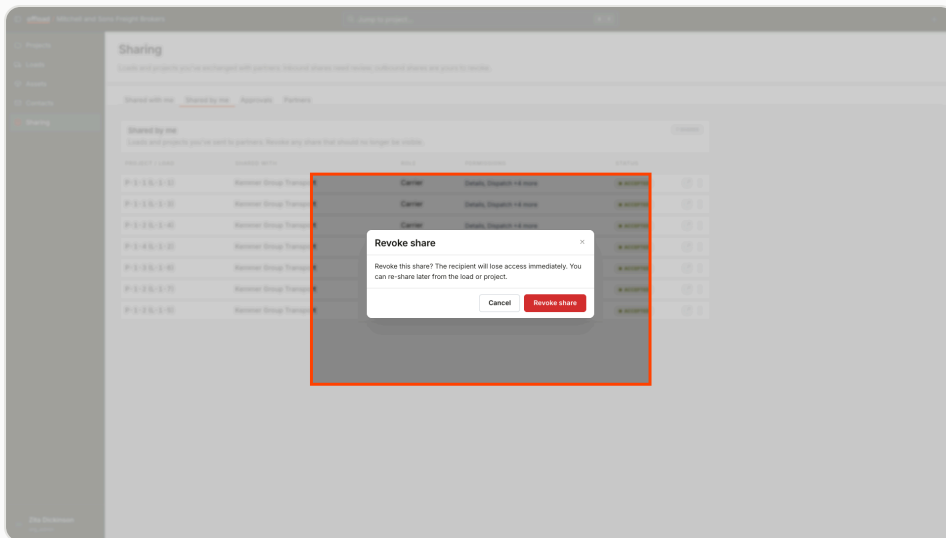

The full route and permit status, readable by anyone with the link. Dispatch, people, and documents stay invisible.

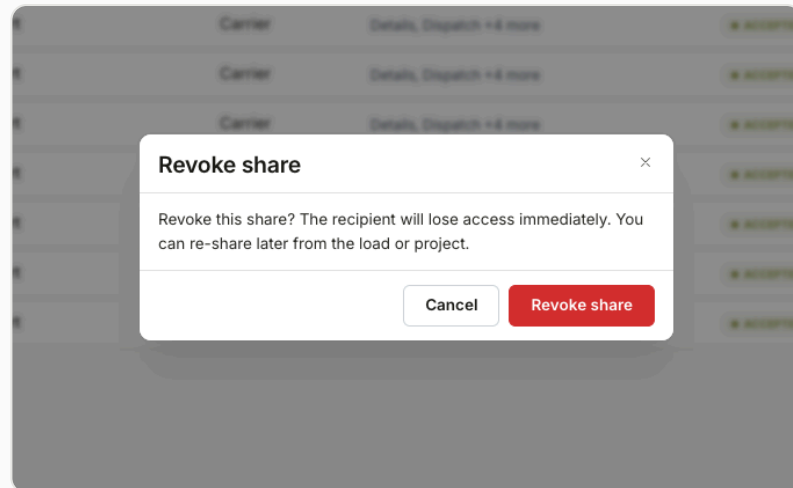

BROKER TAKES IT BACK

PULL ANY SHARE BACK

Every share the broker made is theirs to revoke. The recipient loses access immediately.

Revoking from the Shared-by-me outbox.

Up close: one confirmation, and access ends immediately.

PROJECT / LOAD	SHARED WITH	ROLE	PERMISSIONS	STATUS
P-1-1 (L-1-1)	Kemmer Group Transport	Carrier	Details, Dispatch +4 more	REVOKED
P-1-1 (L-1-3)	Kemmer Group Transport	Carrier	Details, Dispatch +4 more	ACCEPTED

The outbox after: L-1-1 to Kemmer Group Transport, REVOKED. Public links revoke the same way.

WHAT LOAD SHARING GIVES YOU

Every direction, one load

Up to the shipper as read-only, down to the carrier to run it, out to a pilot with no account. One load, one source of truth, no email attachments.

Exactly the right slice

Presets or per-section control. Customer, Carrier, Pilot Escort, and more, each a role with a sensible default. Everyone sees their slice and only that.

The owner stays in control

Partners propose, you approve. Recipients can't re-sell the load. And every share, partner or public link, is yours to revoke the moment you want it back.

Shipper, broker, carrier, pilot. One load, the whole picture, and you decide who sees what.
